PEX/AL/PEX multilayer Pipes

Datasheet
0168EN 12/2019

R999

Multilayer pipes R999 consist of an inner PEX-b layer (polyethylene mesh), an aluminum middle layer welded lengthwise (head-head) with laser/TIG technology and an outer white PEX-b layer. The adhesive middle layers join the aluminum and PEX-b layers homogeneously.

The aluminum layer provides a safe barrier against oxygen and other gases along with an outstanding resistance to crushing.

Multilayer pipes R999 are fit for domestic water, heating and cooling systems according to standard EN 21003.

R999 versions and product codes

Pipe rolls

PRODUCT CODE	SIZE [mm]	PACK [m]

R999I

Multilayer pipes with insulation coating R999I consist of an inner PEX-b layer (polyethylene mesh), an aluminum middle layer welded lengthwise (head-head) with laser/TIG technology and an outer white PEX-b layer. The adhesive middle layers join the aluminum and PEX-b layers homogeneously.

The insulation coating, made with closed-cell polyethylene foam, enhances the system energy efficiency and further reduces the noise level of systems made with synthetic materials.

The insulation section consists of a closed-cell polyethylene foam layer (CFC-free) protected by a special outer film - red or blue for heating systems and light grey for cooling systems.

➤ Fittings

PEX-b/AL/PEX-b multilayer pipes can be combined to mechanical-pressure, compression or press fittings. All fittings include a separator that insulates the pipe aluminum from the fitting to prevent galvanic corrosion.

🔗 **NOTE.** Given the wide range of fittings available, we recommend referring to the latest version of our catalog for sizes and product codes along with the corresponding range of application.

➤ Thermal expansions

Always take into account thermal expansion for planning and installation of PEX-b/AL/PEX-b multilayer pipes. Use the chart below to carry out proper evaluations.

Thermal expansion can be determined by applying the formula $\Delta L = \alpha \times L \times \Delta t$

where:

- ΔL = expansion expressed in mm
- α = linear thermal expansion coefficient corresponding to 0,026 mm/m K
- L = pipe length expressed in m
- Δt = temperature variation expressed in Kelvin [K] or Celsius [°C] degrees

PIPE LENGTH [m]	TEMPERATURE DIFFERENCE [K]							
	10	20	30	40	50	60	70	80
1	0,26	0,52	0,78	1,04	1,3	1,56	1,82	2,08
2	0,52	1,04	1,56	2,08	2,6	3,12	3,64	4,16
3	0,78	1,56	2,34	3,12	3,9	4,68	5,46	6,24
4	1,04	2,08	3,12	4,16	5,2	6,24	7,28	8,32
5	1,3	2,6	3,9	5,2	6,5	7,8	9,1	10,4
6	1,56	3,12	4,68	6,24	7,8	9,36	10,92	12,48
7	1,82	3,64	5,46	7,28	9,1	10,92	12,74	14,56
8	2,08	4,16	6,24	8,32	10,4	12,48	14,56	16,64
9	2,34	4,68	7,02	9,36	11,7	14,04	16,38	18,72
10	2,6	5,2	7,8	10,4	13	15,6	18,2	20,8
LINEAR EXPANSION [mm]								

➤ Pipe laying

During the laying process, some simple precautions must be observed with respect to pipe connection thanks to special fittings and adaptors, pipe bends, protection against UV rays and against any possible damage involving the pipe or its protective sleeve.

- The connection of pipes to distribution manifolds or elbows for tap coupling must be executed using fittings and adaptors of the right size for that specific pipe.
- Pipe laying, fixing and connections have to be realized thus to avoid permanent mechanical stress on components.
- All materials used to manufacture pipes expand when they are heated and shrink when they are cooled: for this reason longitudinal change (ΔL) generated by temperature change should always be considered during installation. (see paragraph "Thermal expansions").
- For surface installation, pipe length must be calculated on the basis of system requirements and distances between pipe supports must be carefully evaluated. Maximum distance between each support (L) depends on the diameter of the pipe used.

PIPE EXTERNAL Ø [mm]	MAX. DISTANCE BETWEEN SUPPORTS (L) [mm]
16	1000
18	1100
20	1250
26	1500
32	2000
40	2250
50	2500
63	2750
75	2750
90	2750

- Supports used in surface installations have the two key functions of supporting the pipe and allowing its thermal expansion. Supports can be fixed, clamping the pipe; or sliding, permitting the pipe to slide as a result of thermal expansion.

FIXED SUPPORT

SLIDING SUPPORT

⚠ WARNING. Secure the pipe with the aid of plastic ties. Avoid using metal ties without protection, as they could damage the pipe.

- In long straight pipe stretches, to absorb any length changes, it is advisable to insert at least one expansion bend every 10 m. For pipes with a diameter equal to or greater than 32 mm, expansion bends are mandatory.

Minimum length of expansion bend (L_b) can be calculated with the following formula: $L_b = C \times \sqrt{\varnothing_e \times \Delta L}$

- L_b - minimum length of the expansion bend in mm
- C** - constant of material (for multilayer pipe the value is 33)
- \varnothing_e - pipe external diameter in mm
- ΔL - pipe longitudinal change in mm

Example:

- $L = 5 \text{ m}$
- $\varnothing_e = 25 \text{ mm}$
- $\alpha = 0,026 \text{ mm}/(\text{m K})$
- $\Delta T = 60 \text{ }^\circ\text{C}$
- $\Delta L = 5 \times 0,026 \times 60 = 7,8 \text{ mm}$
- $L_b = 33 \times \sqrt{25 \times 7,8} = 460 \text{ mm}$

- When bends are required, it is fundamental to use fittings and fix/sliding supports correctly, as per the following drawing. It's advisable to fit an expansion bend each time the pipe changes direction also considering to have clearance around.

L	Distance between fixed support and expansion bend
ΔL	Pipe longitudinal change
F	Fixed support
S	Sliding support
L_b	Length of the expansion bend

➤ Precautions

PEX-b/AL/PEX-b multilayer pipes call for a variety of precautions to guarantee their duration in time and functionality:

- keep the pipe in its package and store in dry roofed areas to prevent damages caused by humidity;
- do not expose to direct sunlight;
- always cut the pipe to be installed using the special tools that provide a clean cut, 90 degrees to the pipe axis and free of burrs;
- after each cut, and before assembling the fitting, carry out the calibration using the special tool and lubricate the seals on the hose connection;
- prevent ice build ups inside the pipe as expansions caused by a change of conditions may damage it irreversibly;
- do not store the pipe at temperatures below -30 °C;
- never expose the pipe to open flames;
- after installation, carry out a pressure test at a pressure 1.5 times the working pressure;
- the bending radius during the laying of the pipes must be greater than 5 times the external diameter of the pipe; this value can drop to 4 times for pipes with external diameter max. 20 mm, with tube bending spring;
- pipes with fittings already assembled must not be bent. If bending cannot be avoided for technical reasons, the area of the pipe near the fitting must not be subjected to permanent stresses;
- two consecutive fittings must be installed at such a distance so as not to generate reciprocal stresses on all components, both during system installation and operation;
- in installations pipe must always be protected from UV rays and fluorescent lights that could alter its chemical-physical properties;
- make sure the pipe is not exposed to solar radiation or fluorescent lights for long periods;
- if the pipe is chased without a protective sleeve, it has to be covered with at least 15 mm thick screed to prevent cracking of the plaster due to thermal expansion;
- avoid chasing fittings as much as possible. If this is not possible, make sure the fitting can be inspected or protect it from contact with building material and make a note of its position in the project documentation;
- after installing the pipes and before covering them, it is advisable to test the system under pressure, so as to immediately identify any leaks (see paragraph "Pressure test");
- following the pressure test, the sleeves must be protected by encasing them with cement so that the pipes cannot be crushed or moved.

➤ Warranty

The warranty shall be void when:

- 1) the working conditions vary from those provided for;
- 2) the pipe is used to transfer fluids not compatible with the construction material;
- 3) the installation instructions are not fully complied with;
- 4) the pipe shows visible defects caused by accidental factors upon installation or when the system is pressurized;
- 5) the pipe is installed using components not produced by Giacomini or different from the ones allowed.

► Classification of working conditions (EN ISO 21003-1)

The performance specifications for pipe-based systems complying with EN ISO 21003-1 refer to a project with a 50-year operational life.

RANGE OF APPLICATION	WORKING TEMPERATURE T_D [°C]	DURATION OF T_D [years]	MAX WORKING TEMPERATURE T_{MAX} [°C]	DURATION OF T_{MAX} [years]	FAILURE TEMPERATURE T_{FAIL} [°C]	DURATION OF T_{FAIL} [h]
CLASS 1 Domestic hot water (60 °C)	60	49	80	1	95	100
CLASS 2 Domestic hot water (70 °C)	70	49	80	1	95	100
CLASS 4 Floor heating and low-temperature systems	20 + 40 + 60	2,5 + 20 + 25	70	2,5	100	100
CLASS 5 Radiator heating and high-temperature systems	20 + 60 + 80	14 + 25 + 10	90	1	100	100

- Working temperature (T_D): working temperature provided for the range of application, expressed in °C.
- Max. working temperature (T_{MAX}): the working temperature highest value, allowed only for a short time.
- Failure temperature (T_{FAIL}): the highest temperature possible when control systems fail (the time allowed for this value is 100 h over 50 years of uninterrupted operation).

► Product specifications

R999

PEX-b/AL/PEX-b metal multi-layer pipe. Color of outer layer: white. PEX-b (polyethylene mesh) inner layer, aluminum middle layer welded lengthwise (head-head) with laser/TIG technology, PEX-b (polyethylene mesh) outer layer. The adhesive middle layers join the aluminum and PEX layers homogeneously. The aluminum layer provides a safe barrier against oxygen and other gases along with an outstanding resistance to crushing. Application classes (EN ISO 21003-1) 1, 2, 4, 5 (fit for transfer of drinking water). Min. working temperature: -60 °C (but always above freezing temperature of transfer fluid). Max. working temperature (EN ISO 21003-1): 95±100 °C. Max. working pressure (EN ISO 21003-1): 10 bar. Thermal conductivity: 0,42±0,52 W/m K. Reaction to fire (EN 13501-1): C-s2,d0. Provided in rolls or 5 m bars.

R999I

Metal multi-layer PEX-b/AL/PEX-b pipe with thermal insulation. PEX-b (polyethylene mesh) inner layer, aluminum middle layer welded lengthwise (head-head) with laser/TIG technology, PEX-b (polyethylene mesh) outer layer. The adhesive middle layers join the aluminum and PEX layers homogeneously. The aluminum layer provides a safe barrier against oxygen and other gases along with an outstanding resistance to crushing. The insulation layer is protected by a special outer film - red or blue for the heating pipe and light grey for the heating and cooling pipe. Application classes (EN ISO 21003-1) 1, 2, 4, 5 (fit for transfer of drinking water). Min. working temperature: -60 °C (but always above freezing temperature of transfer fluid). Max. working temperature (EN ISO 21003-1): 95±100 °C. Max. working pressure (EN ISO 21003-1): 10 bar. Thermal conductivity: 0,40 W/m K. Reaction to fire (EN 13501-1): bare pipe (EN 13501-1):C-s2,d0; insulation (EN 13501-1 LNE P126686): C₁-s1,d0. Provided in rolls.

⚠ Safety Warning. Installation, commissioning and periodical maintenance of the product must be carried out by qualified operators in compliance with national regulations and/or local standards. A qualified installer must take all required measures, including use of Individual Protection Devices, for his and others' safety. An improper installation may damage people, animals or objects towards which Giacomini S.p.A. may not be held liable.

♻ Package Disposal. Carton boxes: paper recycling. Plastic bags and bubble wrap: plastic recycling.

ℹ Additional information. For more information, go to giacomini.com or contact our technical assistance service. This document provides only general indications. Giacomini S.p.A. may change at any time, without notice and for technical or commercial reasons, the items included herewith. The information included in this technical sheet do not exempt the user from strictly complying with the rules and good practice standards in force.

♻ Product Disposal. Do not dispose of product as municipal waste at the end of its life cycle. Dispose of product at a special recycling platform managed by local authorities or at retailers providing this type of service.
